## About Me

I was introduced to web development from a young age, started with building simple HTML web pages and made my progress all the way to newest web development technologies.

After successfully completing my master's degree, I actively dedicated myself to learning new technologies and improving my knowledge. One of my favorite projects is Movie Twist, which at one point counted over a thousand users who tried the application on a monthly basis.

Also I am a big movie lover and book lover. Formula 1 and MotoGP fan. In short, just happy to be here and do what I love!
